SKILLS

FRONTEND
React · TypeScript · Next.js · HTML/CSS

BACKEND
Node.js · GraphQL · Java

INFRASTRUCTURE
AWS · Vercel · Module Federation

BLOCKCHAIN
Bitcoin · Lightning Network · Handshake · Web3

LEADERSHIP
Agile / Scrum · TDD · Code Reviews · Mentoring

LANGUAGES

Portuguese	Native
English	Fluent
Spanish	Advanced

EDUCATION

UniCesumar
OO Development in Java
2012 – 2013*

UNIPAR
Analysis & Software Development
2007 – 2009

FERNANDO FALCI

SOFTWARE ENGINEER

falci.me/cv

PROFILE

Full-stack software engineer with 15+ years of professional experience across startups and enterprise environments, specializing in React frontends, Node.js backends, and technical leadership. Hands-on by nature and equally comfortable setting technical direction, running hiring processes, and presenting to stakeholders.

Career highlights include leading the Backbone-to-React migration at eDreams (10k+ DAU, zero downtime), architecting a micro-frontend platform at Adevinta (one of Europe's largest marketplace groups), and most recently serving as CTO of Namebase.io, the largest platform in the Handshake blockchain ecosystem.

WORK EXPERIENCE

Namebase.io — 2022 – 2026

Sr. Software Engineer / CTO

- Owned the full technology roadmap for namebase.io and hns.id, the primary Handshake domain marketplace and resolution platform, leading a cross-functional remote team of smart contract engineers, backend developers, and UX designers.
- Coordinated engineers contributing to the Handshake open-source protocol repository, bridging platform requirements with core protocol development.
- Reduced AWS infrastructure costs by 40% through targeted architectural changes and resource rightsizing; built observability from scratch with unified metrics, dashboards, and alerting, cutting incident response times significantly.
- Implemented EPP (Extensible Provisioning Protocol) integrations, expanding platform compatibility with global domain registries and opening new partnership opportunities.

Adevinta — Feb 2020 – Feb 2023

Sr. Software Engineer

- At Adevinta, one of Europe's largest digital marketplace groups (Leboncoin, Milanuncios, Willhaben; 3B+ annual revenue): architected a Module Federation-based refactor of the internal backoffice, enabling 4+ teams to deploy independently and cutting conflicts by 45%.
- Contributed to the company's Federated GraphQL layer, standardizing data-access patterns and improving query performance; championed test automation, CI/CD pipelines, and code review culture adopted across the frontend guild.

eDreams Odigeo — Jun 2017 – Feb 2020

Sr. Software Engineer

- Led the full migration of eDreams' primary booking interface from Backbone.js to React (10,000+ daily active users, zero downtime), delivering 30% faster load times and a 40% reduction in codebase size.
- Designed and ran a systematic A/B testing programme alongside product and design, increasing feature adoption rates by 20%.

Mobile-DI — 2015 – Mar 2018

Development Analyst

- Managed a distributed team delivering Angular applications for enterprise clients, owning architectural decisions, establishing coding standards, and mentoring junior developers through structured code reviews.
- Served as primary technical contact for stakeholders, translating business requirements into engineering plans and delivery timelines.

OPEN SOURCE

Handshake Improvement Proposals (HIPs) — 2020 – Present

Principal Coordinator

- Principal coordinator of the HIPs repository, the formal process for proposing and ratifying changes to the Handshake protocol, analogous to Bitcoin's BIPs.
- Authored HIP2, which was adopted by multiple ecosystem projects including BobWallet.
- Also maintain hns.dev, an open-source resource hub for the Handshake ecosystem.
