

Fernando Falci

Staff Software Engineer | cv@falci.me | <https://falci.me>

Staff-level full-stack engineer with 15+ years of experience driving technical direction across startups and large-scale enterprise platforms. Specializes in React frontends, Node.js backends, and distributed systems architecture, with a track record of leading cross-functional teams, scaling systems, and setting engineering standards adopted org-wide. Hands-on by nature and equally comfortable owning technical roadmaps, mentoring engineers, and aligning stakeholders.

Technical Skills

Frontend: React, TypeScript, Next.js, HTML/CSS, Tailwind CSS, Storybook, TanStack Query

Backend: Node.js, GraphQL, Java, Spring Boot, NestJS, Express, REST APIs, gRPC

Databases: PostgreSQL, MySQL, Redis, DynamoDB, SQLite, Prisma

Infrastructure: AWS, Vercel, Kubernetes, Helm, Docker, GitHub Actions, OpenTelemetry, Prometheus, Grafana

Blockchain: Bitcoin, Lightning Network, Handshake, Ethereum/EVM, Solidity, Web3, DeFi, NFT

Leadership: Agile / Scrum, TDD, Code Reviews, Mentoring, Technical Roadmap, Architecture

Experience

Sr. Software Engineer / CTO at Namebase.io

January 2022 - January 2026 | <https://www.namebase.io>

Project: hns.id and Namebase Platform

- Owned the full technology roadmap for hns.id, the Web3 Handshake domain marketplace and resolution platform, leading a cross-functional remote team of smart contract engineers, backend developers, and UX designers.
- Led development of the main Namebase application, a Handshake marketplace and auction platform.
- Designed and implemented a custom OIDC solution with blockchain integration for secure authentication and identity flows across Namebase products.
- Coordinated engineers contributing to the Handshake open-source protocol repository, bridging platform requirements with core protocol development.
- Reduced AWS infrastructure costs by 40% through targeted architectural changes and resource rightsizing; built observability from scratch with unified metrics, dashboards, and alerting, cutting incident response times significantly.
- Implemented EPP (Extensible Provisioning Protocol) integrations, expanding platform compatibility with global domain registries and opening new partnership opportunities.

Skills: TypeScript, React, Next.js, Node.js, PostgreSQL, Redis, DynamoDB, AWS, Kubernetes, Helm, Blockchain, Handshake, Ethereum/EVM, Solidity, OAuth2, OIDC, JWT, OpenTelemetry, Prometheus, Grafana, Sentry, TDD, CTO, Leadership

Sr. Software Engineer at Adevinta

January 2020 - January 2023

Project: Backoffice Micro-Frontend Platform

- At Adevinta, one of Europe's largest digital marketplace groups: architected a Module Federation-based refactor of the internal backoffice, enabling 4+ teams to deploy independently and cutting deployment conflicts by 45%.
- Contributed to the company's Federated GraphQL layer, standardizing data-access patterns and improving query performance.
- Championed test automation, CI/CD pipelines, and code review culture adopted across the frontend guild.

Skills: TypeScript, React, Micro-frontends, Module Federation, GraphQL, Node.js, Webpack, Nx, Apache Kafka, OAuth2, GDPR, Datadog, TDD, Cypress, Leadership, Mentoring

Sr. Software Engineer at eDreams Odigeo

January 2017 - January 2020

Project: Booking Interface Migration and A/B Testing

- Led the full migration of eDreams' primary booking interface from Backbone.js to React (10,000+ daily active users, zero downtime), delivering 30% faster load times and a 40% reduction in codebase size.
- Designed and ran a systematic A/B testing programme alongside product and design, increasing feature adoption rates by 20%.

Skills: React, TypeScript, Redux, A/B Testing, Performance, Migration, i18n, Accessibility, Agile, Scrum

Development Analyst at Mobile-DI

January 2015 - January 2018

Project: Enterprise Angular Applications

- Managed a distributed team delivering Angular applications for enterprise clients, owning architectural decisions, establishing coding standards, and mentoring junior developers through structured code reviews.
- Served as primary technical contact for stakeholders, translating business requirements into engineering plans and delivery timelines.

Skills: Angular, Architecture, Leadership, Mentoring, Agile, Scrum, PostgreSQL, Multi-tenancy

Software Engineer at Matera Systems

January 2014 - January 2017 | <https://matera.com.br/>

Project: TV/Streaming Platform

- Contributed to the development of a platform for a major U.S. company in the TV/streaming sector, implementing features across the stack with Java and Angular and collaborating closely with cross-functional teams to deliver end-to-end solutions.

Skills: Java, Angular, Microservices, DDD, TDD, MySQL, Jenkins

Junior Software Engineer at IADTEC

January 2013 - January 2014 | <https://iadtec.com.br/>

Project: Web Applications

- Developed Java-based web applications for clients in the grocery and retail sectors, implementing RESTful APIs and custom UI components.

Skills: Java, Angular, REST APIs

Junior Software Engineer at Elotech

January 2011 - January 2012 | <https://www.elotech.com.br/>

Project: Healthcare Platform

- Contributed to the development of a platform for the healthcare industry, working primarily with jQuery and PHP to build interactive features and backend services.
- Visited client sites to perform on-site deployments and support go-live activities.

Skills: PHP, jQuery

Personal Projects

Open Source Contributor - Handshake Protocol (HIPs)

January 2020 - Present | <https://hns.dev/HIPs/>

Project: Handshake Improvement Proposals

- Principal coordinator of the HIPs repository, the formal process for proposing and ratifying changes to the Handshake protocol, analogous to Bitcoin's BIPs.
- Authored HIP2, which was adopted by multiple ecosystem projects including BobWallet.
- Maintain hns.dev, an open-source resource hub for the Handshake ecosystem.
- Improved the documentation deployment process by creating a CI/CD pipeline that automatically builds and deploys docs and HIPs on every update.
- Built an open-source page builder for link-in-bio style pages using Web Components.
- Built an open-source Handshake price tracker using Python with AI-assisted workflows and SQLite.

Skills: Blockchain, Handshake, Bitcoin, Open Source, Python, SQLite, GitHub Actions, Web Components

Open Source Contributor - BobWallet

January 2020 - Present | <https://bobwallet.io/>

Project: BobWallet Contributions

- Contributed to BobWallet, a popular Handshake wallet and name management tool, implementing features such as emoji support for domain names and improving the user interface for name auctions.

Skills: Blockchain, Handshake, React, JavaScript, Open Source, i18n

Independent Developer

January 2010 - Present

Project: Anonymous Bot

- Built Anonymous Bot, a SaaS Slack bot developed with NestJS.

Skills: NestJS, Node.js, PostgreSQL, Redis, Stripe, Prisma, GitHub Actions, OpenTelemetry, Grafana, Sentry, TDD

Project: Lightning Network Liquidity Bot

- Created a bot to connect Amboss' MAGMA and automate the sale of liquidity channels on the Lightning Network.

Skills: Rust, Blockchain, Lightning Network, Open Source

Project: Dynamic CV

- Built this dynamic CV with AI-assisted workflows.

Skills: React, TypeScript, Vite, GitHub Actions, AI
